OXYHYDROXIDE**

Examiner: Adam Arciero

S.N. 10/567,347

Art Unit: 1795

December 3, 2009

Detailed Action

1. The Applicant's amendment filed on September 22, 2009 was received. Claim 1-6 are currently pending.

2. The text of those sections of Title 35, U.S.C. code not included in this action can be found in the prior Office Action issued on June 22, 2009.

Specification

3. The objection to the title of the invention is withdrawn, because Applicant has amended the title accordingly.

Claim Rejections - 35 USC § 112

4. The claim rejections under 35 U.S.C. 112, first paragraph, on claims 1-6, as failing to comply with the enablement requirement are withdrawn, because Applicant's arguments are persuasive.

Claim Rejections - 35 USC § 102/103

5. The claim rejections under 35 U.S.C. 102/103 over DANSUI et al. on claims 1-2 and 5-6 are withdrawn, because Applicant has amended independent claim 1.

Art Unit: 1795

6. The claim rejections under 35 U.S.C. 103 as being unpatentable over DANSUI et al. and TANIGAWA et al. on claims 3-4 are withdrawn, because Applicant has amended independent claim 1.

Reasons for Allowance

7. Claims 1-6 are allowed. The following is the Examiner's statement of reasons for allowance: The invention of independent claim 1 recites: an alkaline primary battery comprising:

- a positive electrode comprising a positive active material;
- a gelled negative electrode comprising zinc powder serving as a negative electrode active material;
- a separator disposed between said electrodes;
- and an electrolyte; wherein
- said positive electrode active material comprises spherical nickel oxyhydroxide comprising a crystal of a beta-type structure;
- a powder X-ray diffraction profile of said spherical nickel oxyhydroxide obtained using a Cu target is such that a half-width W of a diffraction peak P derived from a (001) plane is 0.6° or less;
- the ratio H/W of a height H of said peak P to said half-width W is 10,000 or more,
- and nickel contained in said spherical nickel oxyhydroxide has a mean valence of 2.95 or more.

The closest prior arts of record, HAYASHI (JP 2002-203546), teaches a nickel-

Art Unit: 1795

zinc battery comprising a gelled negative electrode comprising a zinc powder as a negative active material, a positive electrode, an electrolyte and a separator separating said electrodes (Abstract). HAYASHI further discloses wherein the positive active material comprises spherical beta-type nickel oxyhydroxide particle. However, the closed prior arts of record do not teach or suggest the claimed properties such as the half-width of the diffraction peak or the ratio of the height of the peak to the half-width of the peak. The Applicant has persuasively argued that the claimed properties are not inherent and depend on the reaction atmosphere temperature and the oxidation treatment time, as seen in Tables 1 and 2 of the instant disclosure.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
